DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 18 November 2002 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 4-8, 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Kim et al. (Kim) (U.S. Patent No. 6,100,953).

As to claims 1, 4 and 8: In describing the prior art, Kim discloses a liquid crystal display device ((Fig. 1A) with an insulating film (passivation layer, Col. 1, lines 31-32) on a first substrate, a first electrode (13) having a plurality of slit patterns directly contacting the insulating film (Fig. 1A), a light shielding layer (15) below each slit pattern, a second electrode (17) on a second substrate and a

liquid crystal layer between first and second substrates (Col. 1, lines 44-45) and the alignment directions of the liquid crystal layer (Col. 1, lines 51-53).

As to claims 5-7 and 12-14: Kim also discloses that the first electrode (13) is made of a transparent conductive material, ITO (Col. 4, lines 53-55), and the second electrode (17) also includes a transparent conductive material ITO (Col. 5, lines 46-48) and the passivation layer (insulating layer) on the entire first substrate (Fig. 1A).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim in view of Woo et al. (Woo) (U.S. Patent No. 6,067,140).

As to claims 2, 9-11: Although Kim discloses a light shield layer (15), but the layer is not in the middle portion of the first electrode. However, Woo discloses a liquid crystal display device with the light- shielding layer (130) below the middle portion of the first electrode (121). The light- shielding layer must be formed at the boundary region (disinclination line) to shield light entering this region (Col. 1, lines 57-59). Thus it would have been obvious to one skilled in the art in view of Woo to employ a light shielding layer under each slit and at the

middle portion of the first electrode for preventing leakage at the disinclination lines, thereby improving contrast.
